www.dandpconstruction.com

When the decision was made by D & P Construction to enter into the field of demolition, we took our years of construction experience and put it to use. Together with well trained administrative and HAZMAT certified field personnel we ensure each client that their project will be accomplished with state of the art "Controlled Demolition" practices.

Our "Controlled Demolition" philosophy allows D & P Construction to address each residential, commercial and industrial project with the mission that upon completion, the owner can be as-

sured their property is rendered clean and clear for future plans.

We are prepared to assist each client with a systematic process to begin work:

- Developing a competitive demolition estimate
- Clarifying the scope of work according to written and verbal specifications
- Communicating to the owner, any environmental issues before the commencement of demolition.
- Implementing safety procedures for both the surrounding inhabitants, as well as, our field

personnel before, during and after each project.

- Providing and Maintaining high tech machines and attachments:

- Hydraulic Breakers
- Demolition Processors
- Shears & Grapples

These attachments also facilitate a primary goal at D & P, which is to reduce the amount of debris that must be "disposed of". Call it our green finger commitment.
